**DETAILED ACTION*****Allowable Subject Matter***

Claims 1-10 are allowed. The following is an examiner's statement of reasons for allowance: The claims are allowable over the prior art of record because the teachings of the references taken as a whole do not teach or render obvious the combination set forth, including that of an electrically operated steering lock device having a lock shaft and a lock shaft moving device coupled to an electric locking motor, the lock device having a protrusion blocking device that engages with a receiving portion in the lock shaft when the lock shaft is retracted from the steer shaft, and a holding part, on the lock shaft, to hold the protrusion blocking device in a position where projection of the lock shaft is blocked, where the protrusion blocking device is actuated by an electric safety motor, where the holding part has an engagement portion.

The closest prior art of record, U.S. Patent Number 6,539,756 to Bartels et al., disclose an electrically operated steering lock device having a lock shaft positionable within a steering shaft, a lock shaft moving device coupled to an electric motor, a protrusion blocking device and a holding part formed on the lock shaft. However, Bartels et al. does not disclose the holding part having an engagement portion to prevent the protrusion blocking plunger from being withdrawn from the blocking device receiving portion even upon activation of an electric safety motor.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

*Conclusion*

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The following patents are cited to further show the state of the art with respect to electrically operated steering shaft locking devices:

U.S. Patent Number 6,862,907 to Hayashi et al., U.S. Patent Number 6,786,069 to Ochi, U.S. Patent Number 4,907,427 to Armstrong.
